

Task6: Interactive Wikipedia App

HTML, CSS, and JavaScript Application

Repository: mdzunaid78/SaiKet-Systems-Tasks

Overview

This is an interactive Wikipedia clone built with vanilla HTML, CSS, and JavaScript. Features include search functionality, article viewing, and a responsive design.

Key Features

1. Search Functionality - Query Wikipedia articles via API
2. Article Display - View full article content with formatting
3. Table of Contents - Auto-generated from article headings
4. Responsive Design - Works on desktop and mobile devices
5. Loading States - Smooth loading indicators during API calls
6. Error Handling - Graceful error messages for connectivity issues

Technical Stack

Language: HTML5 with embedded CSS and JavaScript

APIs: Wikipedia REST API (action=query, list=search)

Fonts: Linux Libertine (serif) and Source Sans 3 (sans-serif)

Styling: Custom CSS with CSS Variables for theming

Color Scheme

Background: #f8f9fa (light gray)

Surface: #ffffff (white)

Accent: #3366cc (Wikipedia blue)

Border: #a2a9b1 (medium gray)

Core Functionality

Search: User enters query -> API call -> Results displayed

Article Load: User clicks result -> Full article fetched -> Rendered

Navigation: Home -> Search -> Results -> Article views

TOC Generation: Extracts h2 headings and creates linked list

Responsive Breakpoints

Desktop: Article with sidebar layout (grid: 1fr 240px)

Mobile (max-width: 700px): Single column, sidebar hidden
